Patents pending

From factory to consumer,  
the **TEMAVI®** system provides benefits  
across the board.

**Greater productivity for manufacturers**

**Faster turnaround time for installers**

**Increased competitiveness for retailers**

**Better quality for consumers**

## FOR MANUFACTURERS

**TEMAVI®** has reinvented the tongue/groove joint to create a system offering remarkable ease of assembly and disassembly along with outstanding stability in assembled flooring.

A solid grip on boards during sanding means more benefits.

- The V-joint is more accurate because the boards are stable.
- Waste is reduced.
- The finishing stage is accelerated.
- Product quality is improved.
- And **TEMAVI®** is perfectly compatible with your current inventory!

What's more, detaching boards for packaging is quicker and easier.

## FOR INSTALLERS

- The **TEMAVI®** system makes it easier and faster to separate boards once out of the package.
- Assembly is much faster on the surface to cover.
- In conventional installations, increased board uniformity makes sanding easier. Installers save on both time and sandpaper.

## FOR DISTRIBUTORS AND RETAILERS

Installers prefer the **TEMAVI®** system because they know it will save them considerable installation time. They secure customer loyalty by providing consistent quality!

## FOR CONSUMERS

Consumers are definitely the ones with the most to gain from the **TEMAVI®** process: their floors will boast superior stability and quality. The risk of noise and creaking is reduced, thanks to the tight fit of the groove/tongue joint.
